## WHO WE ARE

We are a team of experienced & talented consultants for 6+ years and have helped our clients grow their business & profits.

SecurityBoat provides solutions to modernize your security program and overcome staffing, skills, and budget challenges.

### Mission

The cybersecurity issues are the most important agenda for public and private organizations. The mission of Securityboat is to identify the cybersecurity threats and help the organization to mitigate sophisticated issues.

### Vision

Our vision is solving the cybersecurity problems by providing clear and actionable working proof of concept.

## WHAT WE DO

The effort takes to test the components of your IT environment is continuous and can be daunting. The key to improving your cyber posture is being aware of the latest attacks and testing and assessing your defences against those attacks. It is the process of discovering the root causes of problems to identify appropriate solutions. Then, we collaborate quickly to determine and isolate the vulnerability and initiate corrective and preventive actions to ensure the vulnerability cannot be exploited again. We set up a walkthrough call with a client to explain every vulnerability from the final report if needed. Along with that, we also provide proper remediation suggestions to the client for easy and fast mitigation.

As part of the overall strategic advisory and technical advisory offerings, SecurityBoat helps customers better understand the depth and maturity of their current cybersecurity practices.

### Application Pentest

To stop today's sophisticated attacks, you will need more than a scan of your environment to identify vulnerabilities.

### Infra Security

Identifies exploitable vulnerabilities in your internal systems that could expose data or allow unauthorized access.

### Code Review

Experts combine extensive market research and predefined security principles to pinpoint security flaws in source code.

### Cloud Security

This assessment identifies weaknesses in the cloud infrastructure, looks for evidence of exploitation, and outlines ways to prevent future attacks from occurring.

### IoT Security

We remove the burden of security management from you while focusing on developing your product.

### Red Teaming

Red team exercises help cybersecurity teams prepare and gain insights from our experts. The Red Team in the Securityboat attacks your environment,

## WHY CHOOSE US

The desire for security is driven by our passion for securing the world. With our enthusiasm and zeal, we relish the responsibility of testing, analyzing, and combating security threats every day. Securityboat Cybersecurity services ultimately solve cybersecurity problems across their entire platforms and product portfolios.

### Customer First

We collaborate closely with our customers to understand and provide sustainable value to your

### Visionary

We're opposed to the status quo — and we're obsessed with innovating our way forward.

We see things as they are. We believe the best way to build a better security posture is to harness the power

### Quality

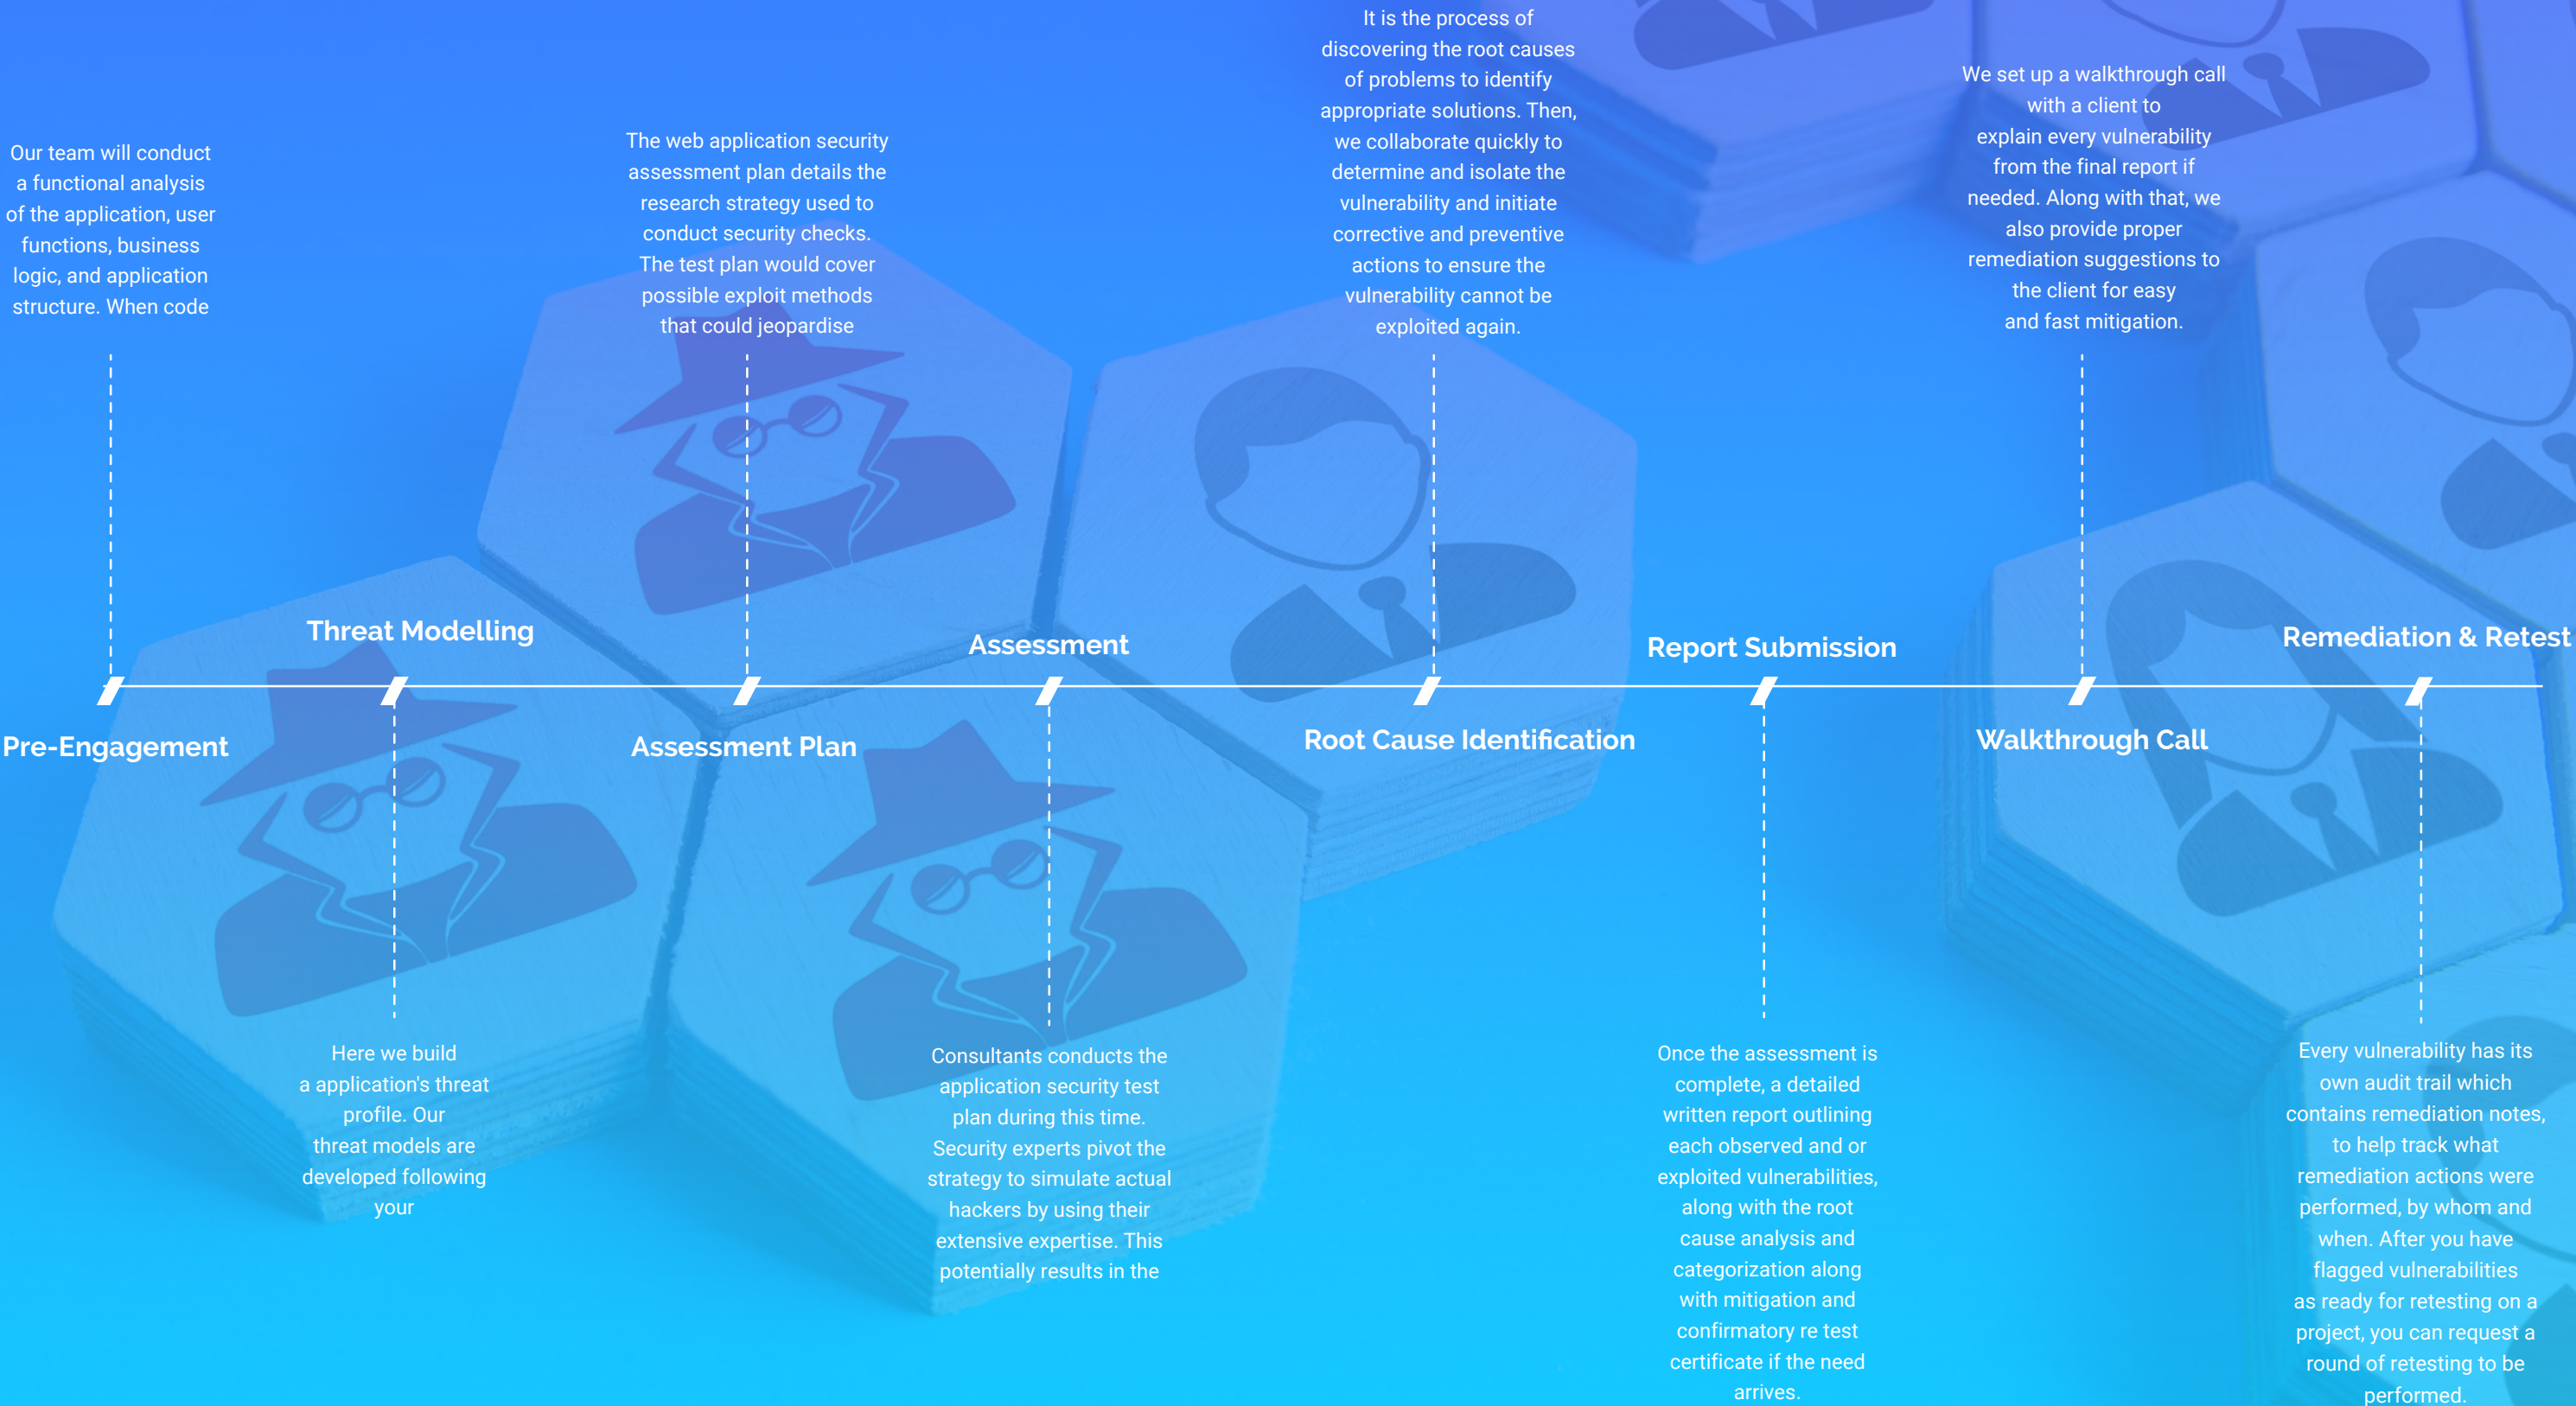

The pursuit of quality in every aspect is a constant endeavour.

### World-Class Expertise

Known for their curiosity, our researchers & engineers adopt new tactics constantly to combat evolving threats.

# Our Approach towards **Security**

## OUR SKILLSET

Securityboat is a cybersecurity company focused on providing top of the line penetration testing, security training, and compliance services. On top of our cybersecurity experience, we also hold several top industry certifications and government clearances

### Certifications Completed by Our Team

### Hands-on by Our Team

We have a strong track record of repeat business from our clients, while continuing to win new customers on a consistent basis.

## Industry Expertise

### E-Commerce

As a retailer, quickly adjusting to customer trends will help you grow your business. But are you prepared to efficiently counter fast-evolving cyber threats? Data breaches, ransomware, and denial of service attackers affect significant retailers and stores and e-commerce websites of all sizes. Our services will help you mitigate cybersecurity risks across the supply chain and detect and respond to data breaches more quickly. Our Cyber Security services help you sell your products and services online in a secure environment that helps you grow your business.

### Manufacturing

Manufacturing is the third most vulnerable sector to experience a data breach. But it's among the least protected. As a result, manufacturers must assess cloud readiness and risk posture and identify vulnerabilities and cloud configuration errors that could expose intellectual property and other sensitive data to cyber risks. Our services will help you detect such threats.

### Insurance

Insurance companies are known to store vast amounts of data about their policyholders. This practice makes them vulnerable to cybercriminals. Providing real-time insurance and financial services with a flawless and frictionless customer experience requires the latest infrastructure technology and highly skilled personnel, and our security experts will help you achieve that.

### Healthcare

Cybersecurity in healthcare and protecting information is crucial for the normal functioning of organizations. Today healthcare organizations use various hospital information systems such as EHR systems, e-prescribing systems, practice management support systems, clinical decision support systems, radiology information systems and computerized physician order entry systems. Our security experts will help you with risk assessments and provide you with various security controls to keep your hospital information system safe.

### Oil And Gas

Oil and gas as a sector are among the most attacked ones in cyberspace. Operations such as exploration (probe and detection), drilling, refining are more vulnerable to cyberattacks. Our services will help oil and gas companies to secure the entire crude-oil lifecycle beginning from upstream activities such as robing and exploration to midstream and downstream operations across transport and retail.

### Public Services

Public services are being routinely and mercilessly subjected to low-level but high-volume attacks. For a developing and densely populated country like India, providing public services catering to the needs of the masses is a challenge. To achieve economic growth with this underlying challenge, going digital is an important step. However, Digital India is not possible without a protective wall of cybersecurity.

## Global Cyber Security Standards

Standards in cyber security are collections of best practices created by experts to protect organizations from cyber threats and help improve their cybersecurity posture. We follow the following standards to protect our customers.

## GLOBAL FOOTPRINT

01 headquarters | 01 branch offices

Securityboat has a rapidly growing team focused on cybersecurity. We leverage a strong IT experience and deep knowledge of the IOT world to help customers understand what they have today and where the biggest gaps are in managing cybersecurity. No matter which industry you operate in, Securityboat can help you implement an overarching cybersecurity solution. Our vast expertise covers all industries from Food & Beverage to Oil & Gas and Petrochemicals. Our quick reaction team is ready to help our customers act quickly in case of a cyber attack – to assess potential damages and recover.

## COMPANY HIGHLIGHTS

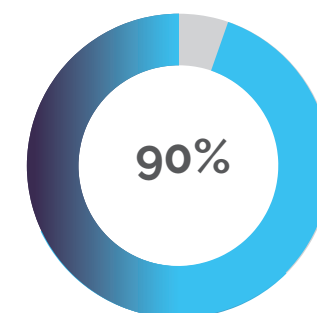

Securityboat is a service-based cybersecurity provider. We protect our clients against threats and vulnerabilities that may be exploited by non-authorized parties. As a result of Securityboat's ability to scale cost-effectively and efficiently, you can maintain continuous cyber resilience. However, a growing number of endpoints need to be controlled, budgets are tight, and in-house security resources are premium. As a firm, we prioritize business risk based on the impact of cyber vulnerabilities and provide clear communication on cybersecurity issues. By doing so, Securityboat cybersecurity services can ultimately solve cybersecurity problems across all platforms and product portfolios. In addition to offering cyber advisory and diagnostic services, Securityboat offers consulting and professional services to improve the Our experts identify the vulnerabilities in businesses' digital assets with quality-controlled administrations that are cost-effective and dependable. Additionally, we will examine NIST, OWASP ASVS, and SANS standards to find security gaps. Thus, we can assist our clients in reducing risks resulting from ever-evolving attack surfaces through a better understanding of which vulnerabilities can be managed and remedied. We offer penetration testing services to test your people's detection and response capabilities, your processes, and your technology by simulating real-world attacks on your IT environment, identifying where weaknesses exist, and identifying where to tighten up your security. By enhancing security by tuning and managing your environments, Securityboat helps you get things done.

## OUR Clients

With decades of combined experience, thousands of hours of practice, and core values from our time in service, we will use our skill set to secure your environment. From large Fortune 500 companies to local small businesses, we have helped hundreds of companies secure their most valuable data. Our solutions are customized to meet your needs and requirements. When you're ready to secure your organization, choose us as your partner.

## WHAT OUR CLIENTS SAY

The moment you speak to Security Boat it's clear that they are passionate at their work. Ninad and his young team are enthusiastic, professional and are fully aware of the implications of their work. They moved fast, worked-hard and delivered a comprehensive report of our online product [www.rvault.in](http://www.rvault.in). Their detailed report and handholding are invaluable and have helped us immensely. Our search for an able, dependable team has ended with Security Boat.

Vijay Kumar  
Director, @Rvault

Reports provided by Securityboat were well written and easy to read. In addition, they met with our security and development teams and answered questions about how to remediate issues in accordance with our best practices. As a result, we were able to plug previously undetected security gaps in our systems. Securityboat has significantly improved the security posture of our organization as a result of its exceptional services.

- Security Officer in the Healthcare Industry

Securityboat's level of communication during the engagement was extremely impressive, and they were extremely thorough. We were notified when tests were conducted, when critical bugs were found, and when any additional information needed to be shared. Having this level of transparency was highly appreciated by our team. They would be a valuable resource for any organization.

- Chief Security Architect in the Services Industry

Securityboat's team went deep down into the rabbit hole to understand the product and find an issue with a business logic rule that took engineering several weeks to analyze within the code.

- CISO in ecommerce industry

We work with companies that look for that extra mile, those who understand the importance of security and are looking for a deeper overview of their security posture to ensure that no rock is left unturned.
